Antelco Green Back® and Purple Back® Valves are a simple on/off device to control the water flow in low pressure irrigation systems.

Antelco Valves allow for multiple irrigation systems to be connected to the one water source. Installing valves at the beginning of the system allows control over which section of garden is being watered as well as how long that section receives water. This provides greater control over watering times and leads to less water wastage.

The large ergonomically designed top sits comfortably in the hand making it easy to turn for on/off operation, while the large bright coloured button allows for quick identification.

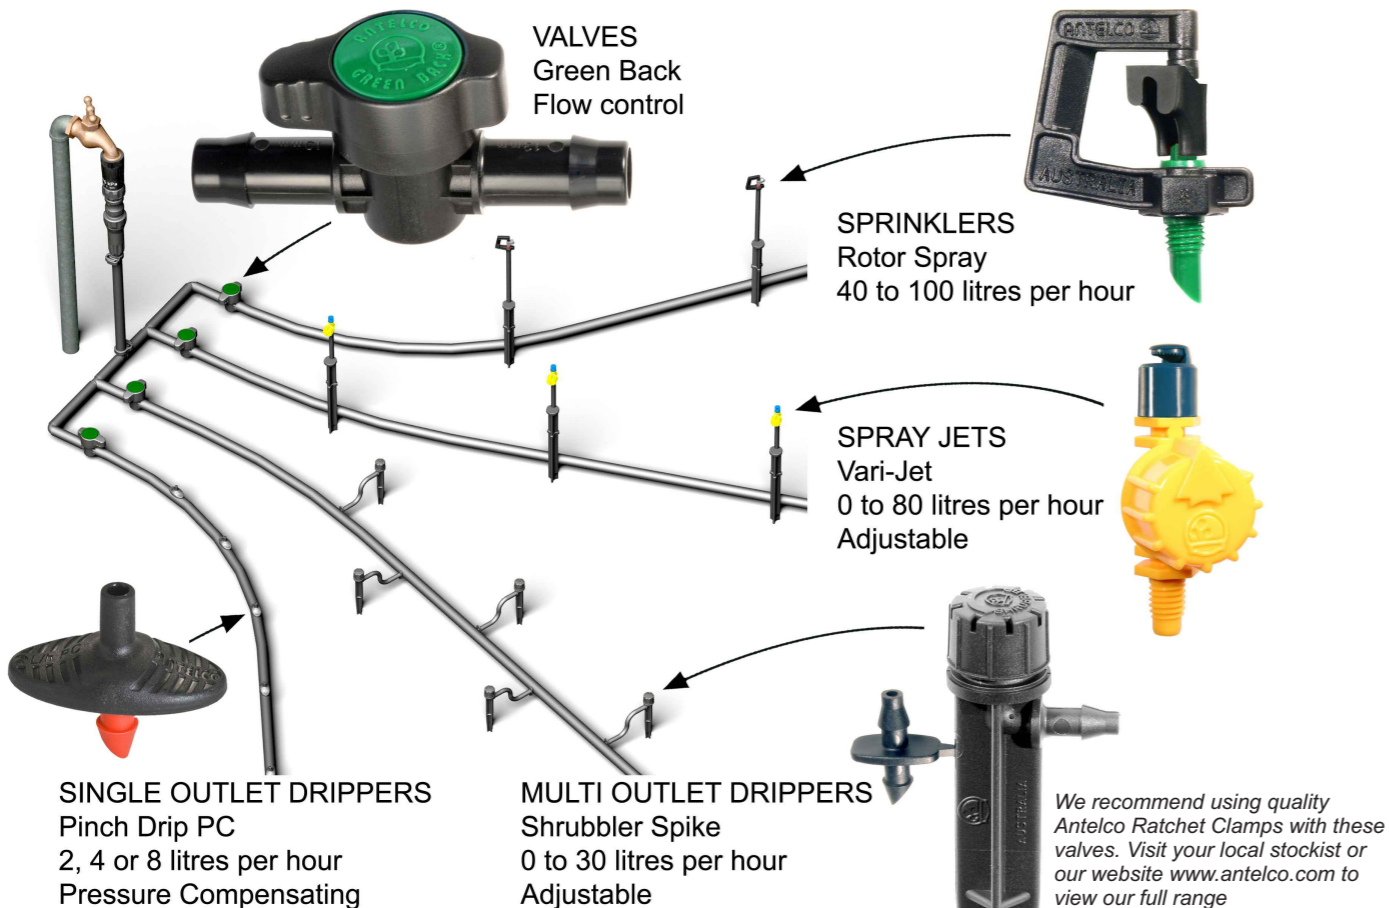

Antelco Green Back® and Purple Back® Valves come in barbed models for standard tubing connections at both inlet and outlet, or threaded models for connection from rain tanks or non-pressurised containers.

### Features

- ☑ Simple on/off operation and straight through flow
- ☑ Operating pressure range up to 300 kPa
- ☑ Green Back® cap for standard irrigation applications
- ☑ Purple Back® cap to indicate “do not drink”
- ☑ Standard barb or threaded models available
- ☑ UV stabilised materials for long life

### Applications

*Secondary zone water diversion and flow control. Always install as an In-Line valve with tubing connected to both inlet and outlet.*
